Purpose of Appraisal **Estimated Retail Value**
Function of Appraisal **Comparison**

One pair electronically tested 14KT rose gold ladies cast & assembled coral and diamond dangle earrings with hinged, snap locking posts. Condition is new, good workmanship. Bright polish finish with milgrain detailing. Identified with markings of "14K". Containing:

Two prong set oval cabochon cut natural red corals approximate total weight of 6.11ct., medium dark, very slightly brownish, orangy red color, (GIA oR 6/3), cut is good. Transmitting light very diffusely, opaque. Naturally occurring internal & external characteristics are present. Color grade is an average for the pair. Graded in the setting.

Red Coral (Corallium Japonicum) is formed undersea by microscopic animals called coral polyps. These tiny, creatures form minute, hard shells. As a colony grows, it takes on complex branching, tree-like forms which allows the maximum number of polyps to be fed by the nutrients in the water. It grows about one quarter inch per year. This color of coral is commonly treated to improve or change the color and stability. Evidence that may confirm this is typically lacking.

Sixty-four prong set round brilliant cut diamonds approximate total weight of 64 Stones = 2.55ct. Graded in the setting.

Clarity **SI-1 to I-1**
Color **G - I**
